

Stormwater Management

- Avoid running a dishwasher or washing machine during storms
- Install rain gardens, green landscaping, or stormwater trees in your yard to help retain rainwater.
- When the weather warms up, resurface driveways, parking pads, or patios with permeable pavement.
- Do not dump fats/oils/greases in private drains or public catch basins.
- Disconnect downspouts from the sewer system. Direct their flow to areas that can absorb the water.

Downspout disconnected from the sewer system
